

Powder Dyestuff Dissolving System

Profix DD

Dissolving; ENMOS Profix-D Dyestuff Dissolving System, provides dissolution of accurately weighted powder paint in accurate water amounts and in proper temperature and conditions. With this system, powder paint helps to achieve the dyeing process in a most accurate way.

Dissolving process is done in a short time and perfectly with the dissolving tank, its structure and special working systematically mixer. The requested dyestuff can be dissolved safely with correct amount of water and the temperature control so it sends to machines with the single line technology.

Dissolving tanks are given as single or double according to the customer's demands. These tanks have 150,270,350,450 capacities and they have polishing internal structure so it can be cleaned with its' washing balls in short time. System has been designed to operate integrated with manual dyeing and controllers.
