

In advanced models, the recipe preparation process for solution bottles is done automatically via full automatic powder dyestuff weighing and solution preparation unit.

Solution preparation unit weighs the powder dyestuff into the solution bottle then once the water adding completed, solution bottles are transferred to their designated locations in Profix LAB bottle stock area.

In advance plus model, sample dyeing is completed automatically by dosing, material loading/unloading which allows laboratory to make sure 100% of the dyeing result without any human interference. From 100g to 500g capacity sample dyeing machines can be placed in Profix LAB advance plus model.
