

Powder Mineral Dissolving System

Profix DS

The Profix DS is the system required for the preparation of solution of chemicals supplied as powder form before transfer to the relevant machinery. The stainless dissolving tank is directly connected to solution storage tanks. The volume of the solution can be arranged according to the project likewise the consumption and the solution concentration can be determined before the solution. After the solution process, the system automatically prepares itself for the next dissolving process by automatic dispensing to tanks and automatic tank washing feature. System dissolves powder chemicals by use of mixer and circulation.

General Specifications

- Ease of installation
- Minimum requirements of service and maintenance
- Remote access and update
- Touchscreen
- Detailed report and analysis software
- Valve leakage test system

Optional Specifications

- Offday Support
- Tank Cleaning System
- Steamheating

Technical Specifications

Maximum Chemical Combination	8	Pump	Centrifugal, PID invert. cont.
Collector	1	Washing	Double Washing Protection
Distribution	Multiple Line	Water Inflow Size	1 1/2" - 2"
Measuring Accuracy	0,5 %	Machine Outflow Size	1 1/2" - 2"
Pump	Electromagnetic	Tank Size	Configurable
